

HIGH WIRE HOOKS

Bato produces and sells two different types of high wire hooks. Single hook without free-fall part and J.S. system with free-fall part, available in 18cm and 22 cm, in various quality and colour options: PP twine, ECO twine and BIO twine. Want to know how efficient the J.S. system is in practice? Watch the instruction video: <https://shorturl.at/bemTh>

Product description	Size	PP twine	ECO twine	BIO twine
Single hook, without free-fall  	18 cm	1/1000 1/1200 1/1500		
	22 cm	1/1000 1/1200 1/1500	200N 300N 400N	1/500 1/600 1/700 1/800 1/1000
J.S.-system, with free-fall  	18 cm	1/1000 1/1200 1/1500		
	22 cm	1/1000 1/1200 1/1500	200N 300N 400N	1/500 1/600 1/700 1/800 1/1000

DESCRIPTION OF TWINE TYPES

PP twine – is made from 100% polypropylene. PP twine is removed after cultivation and recycled by a waste processing company.

ECO twine – is made from 100% ecological yarns without any additional plastics, PLA or other substitutes. The twine is extracted from cellulose without the use of toxic substances. After cultivation, ECO twine can be shredded together with plant residues and immediately returned to the soil, as there is no risk of plant residue contamination. The twine is 100% biodegradable, just like the plant residues.

BIO twine – is made from PLA, a polymer made from lactic acid. Lactic acid is extracted from agricultural crops such as maize and sugar cane. Our BIO twine is biodegradable under industrial composting conditions and is therefore TUV certified. This has been tested and proven by two independent research institutes and a certified laboratory, including Renewi, the leading waste-to-product company.

GENERAL GUIDELINES FOR TWINE TYPES HIGH WIRE HOOKS

Type of vegetable	PP twine			ECO twine			BIO twine				
	1/1000	1/1200	1/1500	200 N	300 N	400 N	1/500	1/600	1/700	1/800	1/1000
