VEGETABLE SUBSTRATE TROUGH 17L/23L

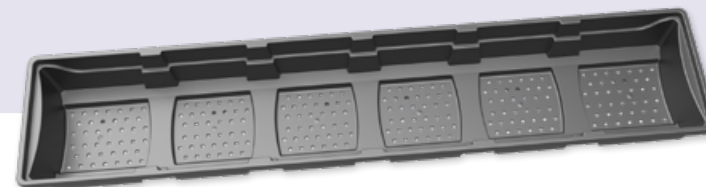

For cultivation on organic substrate

BATO.NL

SPECIALLY DESIGNED FOR VEGETABLE CULTIVATION

The Bato Vegetable Substrate Trough has been designed for growing on organic substrate. The trough combines stable support with numerous drainage holes, ensuring water drains away quickly and the root zone remains easily manageable.

Suitable for peppers, tomatoes, cucumbers and other crops. With a length of 120 cm, growers have a wide choice of planting distances.

Flexibility in substrate choice

The trough can be filled with loose organic substrate (using a filling machine) or with other substrates.

Why use organic substrate?

Organic substrate, such as those containing peat, wood fibre, coir, bark, compost or rice husks, support a richer microbiome. This can help to produce more resilient crops and reduce post-harvest waste costs.

Optimal drainage

With an internal height of 10 cm, the top 1 to 2 cm of the substrate remains drier due to capillary action. The legs keep the container off the ground, ensuring better drainage.

Lower substrate costs, easier clean-up

Buying loose substrate in bulk can save costs. After cultivation, the organic waste material is easy to remove and suitable for recycling or disposal as organic waste.

Optional: PP U-gutter for collecting drainage water

The vegetable substrate trough can be placed in a PP U-gutter.

Dimensions of U-gutter for the 17L tray:
50-150-50 mm.

Dimensions of U-gutter for the 23L tray:
50-200-50 mm.

Available in 0.8, 1.0 and 1.2 mm thicknesses in black or white.

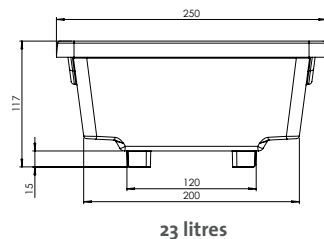

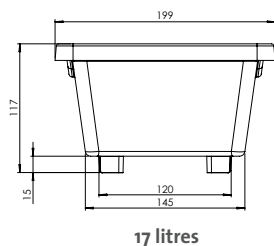

A 15 or 20 cm gutter bridge between the trays is available for additional reinforcement of the side walls.

Technical information

Model	Top exterior	Top interior
Vegetable Substrate Trough 17L	1200 x 199 x 117 mm	1177 x 177 x 100 mm
Vegetable Substrate Trough 23L	1200 x 250 x 117 mm	1177 x 227 x 100 mm

Advantages

- 17 and 23 liters, length 120 cm.
- Excellent drainage for better water management.
- Suitable for installation on the ground, plastic sheeting, ground cover or a steel gutter.
- Can be used in double-row system (17L) and V-shaped growing system (23L).
- Raised off the ground by 15 mm legs.
- Stackable, easy to handle and steamable (under certain conditions).
- No sharp edges, reducing the risk of damage.
- Material: recycled polypropylene.
- Available in black and white.

ABOUT US

For 40 years, Bato has been much more than just a supplier of plastic horticultural products. We are at the forefront of our industry, and we are proud of that. We always strive to deliver the highest quality at a fair price, whilst minimising our environmental impact. And, of course, excellent service is a given.

Working with growers to find suitable and innovative solutions that enable us to get the most out of cultivation: that is our passion!

We are happy to help you with our (bio)plastic solutions to maximise your harvest.
Please feel free to contact us. Scan the QR code, mail to bato@bato.nl or call our office +31 168331030.
